Educating the NEXT generation of digital leaders

Study in Switzerland
MSc in Computer Science, Software Engineering, and Leadership (CSSEL)

**Drive innovation in a digitalized future**

The complex, ambitious, and innovative software systems developed by successful technology companies require a particular kind of leader, possessing both in-depth technical knowledge and excellent leadership abilities. Some traditional master’s programs train software developers, and others train classical managers, but they often fail to deliver the digital-technology-savvy leaders that companies need for positions such as Product Manager, Chief Information Officer, Chief Security Officer, Chief Technology Officer, Chief Program Officer, Chief Security Officer, and others requiring competence on both sides.

The Master of Science in Computer Science, Software Engineering and Leadership (CSSEL) at Constructor Institute Schaffhausen addresses this urgent need. The research-oriented master’s program includes a wide range of courses and projects covering a broad spectrum of computer science and software engineering topics as well as essential management and leadership skills. To prepare students for the role of technology leaders in research and industry, the CSSEL master’s program provides a strong software engineering training covering both development and management, as well as core technical courses in three areas that lie at the heart of modern IT systems:

- Software engineering
- Cybersecurity
- Artificial intelligence

Courses are taught by experts in the field, including permanent Constructor faculty and lecturers from companies. By completing the master’s program, students acquire the core expertise of digital leaders, with a strong technological backbone, and essential management and leadership skills, making them ready for active leadership in the digital technology field.

Constructor University’s multi-country setup prepares them to play a key role in today’s global and multiethnic societies. While many students join the industry in high-profile roles, the CSSEL program is also an excellent preparation for Ph.D. research in software engineering, cybersecurity, artificial intelligence and other advanced topics.

**What we offer**

- Deep interdisciplinary technical expertise
- Entrepreneurial mindset and a can-do mentality
- Strong connections to major target industries
- High-tech, high-touch study environments

**Facts and figures**

- **Academic degree**: Master of Science in Computer Science, Software Engineering and Leadership (CSSEL)
- **Language of instruction**: English
- **Application & Admission dates**: 30th of Apr for all students - Rolling admission
- **Program start date**: Mid September (classes)
- **Teaching mode**: Hybrid mode (ideal if your visa is not ready on time)
- **Study duration**: Classic program (120 ECTS): 4 semesters; Fast-track and part-time options available

**Tuition**

- 10,000 CHF per year for EU and EFTA students **
- 20,000 CHF per year for non-EFTA and non-EU nationals **

**Location**

- Schaffhausen, Switzerland

**Scholarships**

- Full scholarships and tuition waivers for students with excellent grades are available

**Teaching benefits**

- Supported by a unique team of world-class scientists, educators, and leaders

**Program structure**

- **MSc in Computer Science, Software Engineering and Leadership (CSSEL)**

**Year 2**

MSc in Quantum Software Engineering and Computer Science (QSECS)

The future of software is Quantum computing

This program is the first of its kind and seeks to simultaneously prepare students with the software engineering and leadership skills necessary for the quantum future. The dynamic and innovative software systems of the future require a particular kind of individual who possesses in-depth technical knowledge, a holistic approach to solving complex problems, and excellent leadership abilities.

The Master of Science in Quantum Software Engineering and Computer Science (QSECS) at Constructor Institute provides aspiring students with the unique opportunity to dive into quantum computing, learn software engineering, and understand how to create businesses around these exciting and emergent technologies. It is the ideal program for a physicist with strong coding skills or a computer scientist willing to explore quantum computing.

To prepare students for the role of leaders in research and industry, the QSECS master’s program provides a strong software engineering curriculum that covers development and management, and core technical courses in quantum technology. The main areas of research are:

- Software engineering
- Quantum technologies

Constructor Institute’s multi-country setup prepares graduates to play a key role in today’s global and multi-ethnic society. While many students join the technology industry in high-profile roles, the QSECS program also serves as an excellent preparation for Ph.D. research in software engineering, quantum technologies, AI, and other advanced topics.

The main topics covered are:

- Advances in software engineering
- Quantum informatics
- Capstone project
- Agile product development & design
- Entrepreneurship and Intrapreneurship

Facts and figures

- Tuition: 10,000 CHF per year for EU and EFTA students **
  20,000 CHF per year for non-EFTA and non-EU nationals **
- Location: Schaffhausen, Switzerland
- Scholarships: Full scholarships and tuition waivers for students with excellent grades are available
- Teaching benefits: Supported by a unique team of world-class scientists, educators, and leaders.

What we offer

- Deep interdisciplinary technical and quantum expertise
- Small classes of excellent students and approach
- Strong network of interrelated industries
- Modern methods of teaching and contemporary environment

* Deadline could be extended due to individual circumstances and availability
** Spring forward - 10% tuition fee reduction by 30th of April
**Applying knowledge with the Capstone project**

The Capstone project allows students to apply the knowledge and expertise in technical, management, and leadership skills gained throughout the master’s program in a “real-world” project that runs over the course of three semesters. The course teaches students how to effectively design reliable systems that meet the needs of producers and customers, developing solutions to agreed-upon problems with industry partners and laboratories that act as clients. Working closely with instructors and assistants, students are mentored and work in a modern environment supported by open-source IDEs and engineering tools.

**Career opportunities**

Constructor Institute’s master of science programs allow you to graduate with the skills needed to drive innovation in industry, academia, or through your own startup. Through interdisciplinary learning and the development of strong skills in various functional areas, the knowledge gained throughout the master’s program will not only guide you to the career of your choice but will allow you to stand out as an exceptional candidate.

With scientifically up-to-date course content, the skills and knowledge required by the industry needs of today and tomorrow are expertly met. The students profit from unique opportunities such as employment through our network, research project participation, and opportunities to access the EU and Swiss job markets.

**Future leadership jobs**

- **Chief Architect (CA):** A crucial and active horizontal role to drive the technology delivery roadmap across the organization.
- **Chief Product Officer (CPO):** A strategic leader, visionary, and team supervisor of new-generation product management in which computer science, business, and innovation are combined.
- **Chief Program Officer (CPO):** A new leader who focuses on program value flow and delivery, stakeholder communication, cadence and planning, cross-team collaboration, and continuous improvement.
- **Chief Development Officer (CDO):** A strategic leader who shapes an enabling engineering environment – people, structure, agile processes, and tools.
- **Chief Security Officer (CSO):** A transformational leader who takes a “bodyguard” approach rather than a “gate-keeper” one.

**Industry partners**

At Constructor Institute, we believe that to prepare the next generation of leaders in science, students must learn not only from renowned scientists but also from business leaders. Traditional technical education does not fully prepare students for a technical career. Our network of industry partners has experienced this firsthand. That is why we provide access points to several large software and IT organizations headquartered in Schaffhausen, allowing a one-of-a-kind relationship with industries.

- Acronis: Leader in cyber protection.
- Acumatica: Leading innovator in cloud ERP.
- Parallels: Leader in cross-platform solutions.
- Runa Capital: Global venture capital firm.
Knowledge through science
